Preface

This preface describes the audience, organization, and conventions of the *Cisco Nexus 7000 Series NX-OS Overlay Transport Virtualization Command Reference, Release 5.x*. It also provides information on how to obtain related documentation.

This chapter includes the following sections:

- [Audience, page vii](#)
- [Organization, page vii](#)
- [Document Conventions, page vii](#)
- [Related Documentation, page viii](#)
- [Obtaining Documentation and Submitting a Service Request, page x](#)

Audience

This publication is for experienced users who configure and maintain NX-OS devices.

Organization

This reference is organized as follows:

Chapter and Title	Description
Chapter 1, “Overlay Transport Virtualization Commands”	Describes the Cisco NX-OS Overlay Transport Virtualization (OTV) commands.

Document Conventions

Command descriptions use these conventions:

Convention	Description
boldface font	Commands and keywords are in boldface.
<i>italic font</i>	Arguments for which you supply values are in italics.

Send document comments to nexus7k-docfeedback@cisco.com.

[]	Elements in square brackets are optional.
[x y z]	Optional alternative keywords are grouped in brackets and separated by vertical bars.
string	A nonquoted set of characters. Do not use quotation marks around the string or the string will include the quotation marks.

Screen examples use these conventions:

screen font	Terminal sessions and information that the switch displays are in screen font.
boldface screen font	Information you must enter is in boldface screen font.
<i>italic screen font</i>	Arguments for which you supply values are in italic screen font.
< >	Nonprinting characters, such as passwords, are in angle brackets.
[]	Default responses to system prompts are in square brackets.
!, #	An exclamation point (!) or a pound sign (#) at the beginning of a line of code indicates a comment line.

This document uses the following conventions:

Note

Means reader *take note*. Notes contain helpful suggestions or references to material not covered in the manual.

Caution

Means *reader be careful*. In this situation, you might do something that could result in equipment damage or loss of data.

Tip

Means *the following information will help you solve a problem*.

Overlay Transport Virtualization Commands

This chapter describes the Overlay Transport Virtualization (OTV) commands Cisco NX-OS for the Nexus 7000 Series devices.

[Send document comments to nexus7k-docfeedback@cisco.com](mailto:nexus7k-docfeedback@cisco.com)

authentication (OTV)

To configure an authentication keychain string for edge device authentication, use the **authentication** command. To return to the default setting, use the **no** form of this command.

authentication key-chain *keychain-name*

no authentication key-chain *keychain-name*

Syntax Description	<i>keychain-name</i>	Authentication keychain. The maximum length is from 1 to 16 characters.
--------------------	----------------------	---

Defaults	None
----------	------

Command Modes	OTV ISI VPN
---------------	-------------

SupportedUserRoles	network-admin vdc-admin
--------------------	----------------------------

Command History	Release	Modification
	5.0(3)	This command was introduced.

Usage Guidelines	The authentication command is used to assign a password in the authentication of a hello protocol data unit. Only one authentication key chain is applied to an IS-IS interface at one time. If you configure a second authentication command, the first is overridden. You can specify authentication for an entire instance of IS-IS instead of at the interface level by using the authentication command.
------------------	--

This command requires a Transport Services license.

Examples	This example shows how to configure an authentication keychain string for edge device authentication:
----------	---

```
switch# config t
Enter configuration commands, one per line. End with CNTL/Z.
switch(config)# otv-isis default
switch(config-router)# vpn name
switch(config-router-vrf)# authentication keychain OTVKeys
switch(config-router-vrf)#
```

Related Commands	Command	Description
	show otv isis	Displays the IS-IS status and configuration.

Send document comments to nexus7k-docfeedback@cisco.com

authentication-check (OTV)

To enable an authentication check of hello messages between Overlay Transport Virtualization (OTV) edge devices, use the **authentication-check** command. To return to the default setting, use the **no** form of this command.

authentication-check

no authentication-check

Syntax Description This command has no arguments or keywords.

Defaults Enabled

Command Modes OTV ISIS VPN

SupportedUserRoles network-admin
vdc-admin

Command History	Release	Modification
	5.0(3)	This command was introduced.

Usage Guidelines The **authentication-type** command controls authentication checking on incoming hello protocol data units (PDUs).

This command requires a Transport Services license.

Examples This example shows how to enable authentication of hello messages between OTV edge devices:

```
switch# config t
Enter configuration commands, one per line. End with CNTL/Z.
switch(config)# otv-isis default
switch(config-router)# vpn name
switch(config-router-vrf)# authentication-check
switch(config-router-vrf)#
```

Related Commands	Command	Description
	show otv	Displays information about OTV.

Send document comments to nexus7k-docfeedback@cisco.com

authentication-type (OTV)

To configure Overlay Transport Virtualization (OTV) authentication type, use the **authentication-type** command. To return to the default setting, use the **no** form of this command.

authentication-type { **cleartext** | **md5** }

no authentication-type { **cleartext** | **md5** }

Syntax Description

cleartext	Specifies the cleartext authentication method.
md5	Specifies Message Digest (MD5) authentication.

Defaults

Enabled

Command Modes

OTV ISIS VPN

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
5.0(3)	This command was introduced.

Usage Guidelines

Use the **authentication-type** command to configure the authentication type for hello protocol data units (PDUs) on an interface.

This command requires a Transport Services license.

Examples

This example shows how to specify cleartext authentication:

```
switch# config t
Enter configuration commands, one per line. End with CNTL/Z.
switch(config)# otv-isis default
switch(config-router)# vpn name
switch(config-router-vrf)# authentication-type cleartext
switch(config-router-vrf)#
```

This example shows how to specify Message Digest (MD5) authentication:

```
switch# config t
Enter configuration commands, one per line. End with CNTL/Z.
switch(config)# otv-isis default
switch(config-router)# vpn name
switch(config-router-vrf)# authentication-type md5
switch(config-router-vrf)#
```

Send document comments to nexus7k-docfeedback@cisco.com

Related Commands

Command	Description
show otv	Displays information about OTV.

Send document comments to nexus7k-docfeedback@cisco.com

clear otv arp-nd

To clear log Address Resolution Protocol (ARP) and Neighbor Discovery (ND) packets caching information, use the **clear otv arp-nd** command.

clear otv arp-nd

Syntax Description This command has no arguments or keywords.

Defaults None

Command Modes Configuration mode

Supported User Roles network-admin
vdc-admin

Command History	Release	Modification
	5.0(3)	This command was introduced.

Usage Guidelines This command requires a Transport Services license.

Note IPv6 is not supported in this release.

Examples This example shows how to clear log ARP/ND caching information:

```
switch(config)# clear otv arp-nd
switch(config)#
```

Related Commands	Command	Description
	show otv isis	Displays the IS-IS status and configuration.

[Send document comments to nexus7k-docfeedback@cisco.com](mailto:nexus7k-docfeedback@cisco.com)

clear otv isis adjacency

To clear the Intermediate-System-to-Intermediate System (IS-IS) adjacency state, use the **clear otv isis adjacency** command.

```
clear otv isis adjacency [* vpn {vpn-name | all} | overlay interface vpn {vpn-name | all} | system-id sid vpn {vpn-name | all}]
```

Syntax Description		
*	(Optional)	Specifies IS-IS adjacencies on all interfaces.
vpn	(Optional)	Specifies VPN information.
<i>vpn-name</i>		VPN name. The maximum length is 32 alphanumeric characters.
all	(Optional)	Specifies all configured VPNs.
overlay	(Optional)	Specifies an overlay interface.
<i>interface</i>		Specifies overlay interface number. The range is from 0 to 65535.
system-id	(Optional)	Specifies the hostname or the system ID. It is 6 bytes long
<i>sid</i>		Specifies hostname or System ID (in the form of XXXX.XXXX.XXXX).

Defaults None

Command Modes Global configuration mode

SupportedUserRoles network-admin
vdc-admin

Command History	Release	Modification
	5.0(3)	This command was introduced.

Usage Guidelines This command requires a Transport Services license.

Examples This example shows how to clear counters and reset adjacencies with neighbors:

```
switch# clear otv isis adjacency *
switch#
```

Related Commands	Command	Description
	show otv isis	Displays the IS-IS status and configuration.

[Send document comments to nexus7k-docfeedback@cisco.com](mailto:nexus7k-docfeedback@cisco.com)

clear otv isis statistics

To clear Overlay Transport Virtualization (OTV) Intermediate-System-to-Intermediate System (IS-IS) protocol statistics, use the **clear otv isis statistics** command.

```
clear otv isis statistics [ * vpn { vpn-name | all } | overlay interface vpn { vpn-name | all }]
```

Syntax Description		
*	(Optional)	Specifies IS-IS adjacencies on all interfaces.
vpn	(Optional)	Specifies VPN information.
<i>vpn-name</i>		Specifies VPN name. The maximum length is 32 alphanumeric characters.
all	(Optional)	Specifies all configured VPNs.
overlay	(Optional)	Specifies an overlay interface.
<i>interface</i>		Overlay interface number. The range is from 0 to 65535.

Defaults None

Command Modes Global configuration mode

Supported User Roles network-admin
vdc-admin

Command History	Release	Modification
	5.0(3)	This command was introduced.

Usage Guidelines This command requires a Transport Services license.

Examples This example shows how to clear OTV IS-IS protocol statistics:

```
switch# clear otv isis statistics *
switch#
```

Related Commands	Command	Description
	show otv isis	Displays the IS-IS status and configuration.

[Send document comments to nexus7k-docfeedback@cisco.com](mailto:nexus7k-docfeedback@cisco.com)

clear otv isis traffic

To clear Overlay Transport Virtualization (OTV) Intermediate-System-to-Intermediate System (IS-IS) traffic information, use the **clear otv isis traffic** command.

```
clear otv isis traffic [ * vpn {vpn-name | all} | overlay interface vpn {vpn-name | all}]
```

Syntax Description		
*	(Optional)	Specifies IS-IS adjacencies on all interfaces.
overlay	(Optional)	Specifies an overlay interface.
<i>interface</i>		Overlay interface number. The range is from 0 to 65535.
vpn	(Optional)	Specifies VPN information.
<i>vpn-name</i>		VPN name. The maximum length is 32 alphanumeric characters.
all	(Optional)	Specifies all configured VPNs.

Defaults None

Command Modes Global configuration mode

Supported User Roles network-admin
vdc-admin

Command History	Release	Modification
	5.0(3)	This command was introduced.

Usage Guidelines This command requires a Transport Services license.

Examples This example shows how to clear OTV IS-IS traffic information:

```
switch# clear otv isis traffic *
switch#
```

Command History	Command	Description
	show otv isis	Displays the IS-IS status and configuration.

Send document comments to nexus7k-docfeedback@cisco.com

feature otv

To enable Overlay Transport Virtualization (OTV), use the **feature otv** command. To return to the default setting, use the **no** form of this command.

feature otv

no feature otv

Syntax Description This command has no arguments or keywords.

Defaults Disabled

Command Modes Global configuration

SupportedUserRoles network-admin
vdc-admin

Command History	Release	Modification
	5.0(3)	This command was introduced.

Usage Guidelines You must use the **feature otv** command to enable the OTV functionality. The device does not display any OTV commands until you enable the feature.

This command requires a Transport Services license.

Examples This example shows how to enable OTV functionality on the device:

```
switch# config t
switch(config)# feature otv
switch(config)#
```

Related Commands	Command	Description
	show feature	Displays information about the features enabled on the device.

Send document comments to nexus7k-docfeedback@cisco.com

graceful-restart (OTV)

To enable graceful restart for the IS-IS process, use the **graceful-restart** command. To return to the default setting, use the **no** form of this command.

graceful-restart

no graceful-restart

Syntax Description This command has no arguments or keywords.

Defaults Disabled

Command Modes OTV IS-IS VPN

SupportedUserRoles network-admin
vdc-admin

Command History	Release	Modification
	5.0(3)	This command was introduced.

Usage Guidelines Use the **graceful-restart** command to enable graceful restart for the IS-IS process. This command requires a Transport Services license.

Examples This example shows how to enable graceful restart for the IS-IS process:

```
switch# config t
Enter configuration commands, one per line. End with CNTL/Z.
switch(config)# otv-isis default
switch(config-router)# vpn name
switch(config-router-vrf)# graceful-restart
switch(config-router-vrf)#
```

Related Commands	Command	Description
	feature OTV	Enables OTV on this device.

[Send document comments to nexus7k-docfeedback@cisco.com](mailto:nexus7k-docfeedback@cisco.com)

graceful-restart t3 manual (OTV)

To change a manually set T3 default value for the Intermediate-System-to-Intermediate System (IS-IS) process, use the **graceful-restart t3 manual** command. To return to the default setting, use the **no** form of this command.

graceful-restart t3 manual *time*

no graceful-restart t3 manual *time*

Syntax Description	<i>time</i>	Time in seconds. The range is from 30 to 65535.
Defaults	60 seconds	
Command Modes	OTV IS-IS VPN	
SupportedUserRoles	network-admin vdc-admin	
Command History	Release	Modification
	5.0(3)	This command was introduced.
Usage Guidelines	Use the graceful-restart t3 manual command to set the T3 timer, as defined in RFC 3847. This command requires a Transport Services license.	
Examples	This example shows how to set the T3 timer for the IS-IS process: <pre>switch# config t switch(config)# otv-isis default switch(config-router)# vpn name switch(config-router-vrf)# graceful-restart t3 manual 70 switch(config-router-vrf)#</pre>	
Related Commands	Command	Description
	feature OTV	Enables OTV on this device.

Send document comments to nexus7k-docfeedback@cisco.com

hostname dynamic (OTV)

To configure a dynamic hostname exchange for Intermediate-System-to-Intermediate System (IS-IS), use the **hostname dynamic** command. To return to the default setting, use the **no** form of this command.

hostname dynamic

no hostname dynamic

Syntax Description This command has no arguments or keywords.

Defaults ON

Command Modes OTV IS-IS VPN

SupportedUserRoles network-admin
vdc-admin

Command History	Release	Modification
	5.0(3)	This command was introduced.

Usage Guidelines This command requires a Transport Services license.

Examples This example shows how to configure a dynamic hostname exchange for IS-IS: ---need to change this example

```
switch# config t
Enter configuration commands, one per line. End with CNTL/Z.
switch(config)# otv-isis default
switch(config-router)# vpn name
switch(config-router-vrf)# hostname dynamic
switch(config-router-vrf)#
```

Related Commands	Command	Description
	show otv isis	Displays the IS-IS status and configuration.

Send document comments to nexus7k-docfeedback@cisco.com

interface overlay

To create an overlay interface and to enter the interface-overlay configuration mode, use the **interface overlay** command. To remove the overlay interface, use the **no** form of this command.

interface overlay *number*

no interface overlay *number*

Syntax Description	<i>number</i>	Number that you assign to the overlay interface. The range is from 0 to 65535.
--------------------	---------------	--

Defaults	None
----------	------

Command Modes	Global configuration (interface configuration mode)
---------------	---

SupportedUserRoles	network-admin vdc-admin
--------------------	----------------------------

Command History	Release	Modification
	5.0(3)	This command was introduced.

Usage Guidelines	Use the interface overlay command to do the following:
------------------	---

- Create an overlay interface
- Enter the interface-overlay configuration mode

Note

You use the **feature otv** command to enable the Overlay Transport Virtualization (OTV) feature before you can create an overlay interface or access the interface-overlay configuration mode.

You do not have to remove the configuration before you remove the overlay interface.

This command requires a Transport Services license.

Examples	This example shows how to create an OTV overlay interface:
----------	--

```
switch(config)# interface overlay 5
switch(config-if-overlay)#
```

Related Commands	
------------------	--

Send document comments to nexus7k-docfeedback@cisco.com

Command	Description
show feature	Displays information about the features enabled on the device.
show otv	Displays information about OTV.

Send document comments to nexus7k-docfeedback@cisco.com

log-adjacency-changes (OTV)

To log changes in the adjacency state, use the **log-adjacency-changes** command. To return to the default setting, use the **no** form of this command.

log-adjacency-changes

no log-adjacency-changes

Syntax Description This command has no arguments or keywords.

Defaults ON

Command Modes OTV IS-IS VPN

Supported User Roles network-admin
vdc-admin

Command History	Release	Modification
	5.0(3)	This command was introduced.

Usage Guidelines This command requires a Transport Services license.

Examples This example shows how to configure the log changes in the adjacency state:

```
switch# config t
Enter configuration commands, one per line. End with CNTL/Z.
switch(config)# otv-isis default
switch(config-router)# vpn name
switch(config-router-vrf)# log-adjacency-changes
switch(config-router-vrf)#
```

Related Commands	Command	Description
	feature OTV	Enables OTV on this device.

Send document comments to nexus7k-docfeedback@cisco.com

lsp-gen-interval (OTV)

To configure a link-state packet (LSP) generation interval, use the **lsp-gen-interval** command. To return to the default setting, use the **no** form of this command.

lsp-gen-interval { *lsp-max-wait* | *lsp-initial-wait* | *lsp-second-wait* }

no lsp-gen-interval { *lsp-max-wait* | *lsp-initial-wait* | *lsp-second-wait* }

Syntax Description		
<i>lsp-max-wait</i>		Maximum interval (in seconds) between two consecutive occurrences of an LSP being generated. The range is from 50 to 120000. The default is 8000.
<i>lsp-initial-wait</i>		Initial LSP generation delay (in milliseconds). The range is from 50 to 120000. The default is 50.
<i>lsp-second-wait</i>		Hold time between the first and second LSP generation (in milliseconds). The range is from 50 to 120000. The default is 50.

Defaults

The defaults are as follows:

- lsp-max-wait: 8000
- lsp-initial-wait: 50
- lsp-second-wait: 50

Command Modes

OTV IS-IS VPN

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
5.0(3)	This command was introduced.

Usage Guidelines

You can enter **lsp-gen-interval** commands in combination to control the rate of LSP packets being generated, transmitted, and retransmitted.

This command requires a Transport Services license. an Transport Services license.

Examples

This example shows how to configure an LSP-generation interval:

```
switch# config t
Enter configuration commands, one per line. End with CNTL/Z.
switch(config)# otv-isis default
switch(config-router)# vpn name
switch(config-router-vrf)# lsp-gen-interval 9000 60 70
switch(config-router-vrf)#
```

■ lsp-gen-interval (OTV)

lsp-mtu (OTV)

To configure a link-state packet (LSP) maximum transmission unit (MTU) that is generated by the Cisco NX-OS software, use the **lsp-mtu** command. To return to the default setting, use the **no** form of this command.

lsp-mtu *bytes*

no lsp-mtu *bytes*

Syntax Description	<i>bytes</i>	Maximum LSP size in bytes. The range is from 128 to 4352.
Defaults	1392 bytes	
Command Modes	OTV IS-IS VPN	
SupportedUserRoles	network-admin vdc-admin	
Command History	Release	Modification
	5.0(3)	This command was introduced.
Usage Guidelines	This command requires a Transport Services license.	
Examples	This example shows how to set the maximum LSP size to 1500 bytes:	
	<pre>switch# config t Enter configuration commands, one per line. End with CNTL/Z. switch(config)# otv-isis default switch(config-router)# vpn name switch(config-router-vrf)# lsp-mtu 1500 switch(config-router-vrf)#</pre>	
Related Commands	Command	Description
	feature OTV	Enables OTV on this device.

max-lsp-lifetime (OTV)

To configure the lifetime of maximum link-state packets (LSPs), use the **max-lsp-lifetime** command. To return to the default setting, use the **no** form of this command.

max-lsp-lifetime *value*

no max-lsp-lifetime *value*

Syntax Description	<i>value</i>	Maximum LSP lifetime in seconds. The range is from 1 to 65535.
Defaults	1200 seconds	
Command Modes	OTV IS-IS VPN	
SupportedUserRoles	network-admin vdc-admin	
Command History	Release	Modification
	5.0(3)	This command was introduced.
Usage Guidelines	The maximum LSP lifetime must be greater than the LSP refresh interval. This command requires a Transport Services license.	
Examples	This example shows how to set the maximum time that the linkstate packets persists to 11,000 seconds: <pre>switch# config t Enter configuration commands, one per line. End with CNTL/Z. switch(config)# otv-isis default switch(config-router)# vpn name switch(config-router-vrf)# max-lsp-lifetime 1300 switch(config-router-vrf)#</pre>

net (OTV)

To configure an Intermediate System-to-Intermediate System (IS-IS) network entity title for the routing process, use the **net** command. To return to the default setting, use the **no** form of this command.

net *net*

no net *net*

Syntax Description	<i>net</i>	NET network services access point (NSAP) name or address for the IS-IS routing process.
Defaults	Backplane MAC address	
Command Modes	OTV IS-IS VPN	
SupportedUserRoles	network-admin vdc-admin	
Command History	Release	Modification
	5.0(3)	This command was introduced.
Usage Guidelines	<p>If you explicitly configure the net on two different devices belonging to the same overlay, ensure that the area addresses match. If these do not match, the adjacency will not come up.</p> <p>This command requires a Transport Services license.</p>	
Examples	<p>This example shows how to configure a router with a NET that consists of the system ID 0000.0c11.1110 and area address 47.0004.044d.0001.00:</p> <pre>switch# config t Enter configuration commands, one per line. End with CNTL/Z. switch(config)# otv-isis default switch(config-router)# vpn name switch(config-router-vrf)# net 47.0004.044d.0001.00 switch(config-router-vrf)#</pre>	
Related Commands#	Command	Description
	feature OTV	Enables OTV on this device.

otv control-group

To configure the IP multicast group address for the control and broadcast traffic for the specified Overlay Transport Virtualization (OTV) network, use the **otv control-group** command. To remove the multicast group address, use the **no** form of this command.

otv control-group *multicast-addr*

no otv control-group *multicast-addr*

Syntax Description

<i>multicast-addr</i>	External multicast group address for the OTV overlay network control traffic. The multicast group address is an IPv4 address in dotted decimal notation.
-----------------------	--

Defaults

None

Command Modes

Overlay interface configuration

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
5.0(3)	This command was introduced.

Usage Guidelines

Use the **otv control-group** command to configure the multicast group address for control traffic for the specified OTV overlay network and for customer broadcast traffic.

Note

The OTV overlay interface cannot come up if you do not configure this command.

This command requires a Transport Services license.

Examples

This example shows how to configure the multicast group address for the OTV control traffic:

```
switch# config t
Enter configuration commands, one per line. End with CNTL/Z.
switch(config)# interface overlay 1
switch(config-if-overlay)# otv control-group 239.1.1.1
switch(config-if-overlay)#
```

otv data-group

To configure the list of core provider multicast prefixes for multicast data traffic, for the specified Overlay Transport Virtualization (OTV) network, use the **otv data-group** command. To remove the multicast group address, use the **no** form of this command.

otv data-group *multicast-addr/mask*

no otv data-group *multicast-addr/mask*

Syntax Description

multicast-addr/mask Multicast group range used for multicast data traffic over the overlay network, in IPv4 dotted decimal notation. The maximum number of ranges is 8.

Defaults

None

Command Modes

Overlay interface configuration

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
5.0(3)	This command was introduced.

Usage Guidelines

Use the **otv data-group** command to configure the list of core provider multicast prefixes for multicast data traffic.

Note

The OTV overlay interface cannot come up if you do not configure this command.

This command requires a Transport Services license.

Examples

This example shows how to configure the multicast group address for the OTV data traffic:

```
switch# config t
Enter configuration commands, one per line. End with CNTL/Z.
switch(config)# interface overlay 1
switch(config-if-overlay)# otv control-group 239.1.1.1
switch(config-if-overlay)#
```

Related Commands

Command	Description

otv extend-vlan

To enable VLANs to be part of the specified Overlay Transport Virtualization (OTV) network and enable OTV advertisements for these VLANs, use the **otv extend-vlan** command. To return to the default setting, use the **no** form of this command.

otv extend-vlan *vlan-range*

no otv extend-vlan *vlan-range*

Syntax Description

<i>vlan-range</i>	VLANs that are associated with the specified OTV overlay. The range is from 1 to 3967 and from 4048 to 4093.
-------------------	--

Defaults

No VLANs are enabled for OTV advertisements.

Command Modes

Overlay interface configuration

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
5.0(3)	This command was introduced.

Usage Guidelines

Use the **otv extend-vlan** command to specify the VLAN or range of VLANs to be extended across the overlay network.

This command requires a Transport Services license.

Examples

This example shows how to associate VLANs with the specified OTV overlay:

```
switch(config)# interface overlay 5
switch(config-if-overlay)# otv extend-vlan 5-10,14
switch(config-if-overlay)#
```

Related Commands

Command	Description
show feature	Displays information about the features enabled on the device.

otv isis csnp-interval

To configure an Overlay Transport Virtualization (OTV) Intermediate-System-to-Intermediate System (IS-IS) complete sequence number PDUs (CSNPs) interval in seconds, use the **otv isis csnp-interval** command. To return to the default setting, use the **no** form of this command.

otv isis csnp-interval *seconds*

no otv isis csnp-interval *seconds*

Syntax Description	<i>seconds</i>	Interval in seconds. The range is from 1 to 65535.
---------------------------	----------------	--

Defaults	10 seconds
-----------------	------------

Command Modes	Interface configuration
----------------------	-------------------------

SupportedUserRoles	network-admin vdc-admin
---------------------------	----------------------------

Command History	Release	Modification
	5.0(3)	This command was introduced.

Usage Guidelines

Use the **isis csnp-interval** command to configure the interval between CSNPs sent on the interface. This command applies only for the designated router (DR) for a specified interface. The CSNP interval can be configured independently for Level 1. Configuring the CSNP interval does not apply to serial point-to-point interfaces.

This command requires a Transport Services license.

Examples

This example shows how to specify the interval between CSNPs on an interface:

```
switch(config-if-overlay)# otv isis csnp-interval 100
switch(config-if-overlay)#
```

Send document comments to nexus7k-docfeedback@cisco.com

otv-isis default

To enter the OTV ISIS VPN configuration mode, use the **otv-isis default** command. To return to the default setting, use the **no** form of this command.

otv-isis default

no otv isis default

Syntax Description This command has no arguments or keywords.

Defaults None

Command Modes OTV ISIS VPN

SupportedUserRoles network-admin
vdc-admin

Command History	Release	Modification
	5.0(3)	This command was introduced.

Usage Guidelines You must add the VPN name or a second line in order to enter the OTV ISIS VPN mode. This command requires a Transport Services license.

Examples This example shows how to enter the OTV ISIS VPN configuration mode:

```
switch# config t
Enter configuration commands, one per line. End with CNTL/Z.
switch(config)# otv-isis default
switch(config-router)# vpn name
switch(config-router-vrf)#
```

Related Commandss	Command	Description
	show otv isis	Displays the Intermediate System-to-Intermediate System status and configuration.

Send document comments to nexus7k-docfeedback@cisco.com

otv isis hello-interval

To configure the hello interval in seconds, use the **otv isis hello-interval** command. To return to the default setting, use the **no** form of this command.

otv isis hello-interval *seconds*

no otv isis hello-interval *seconds*

Syntax Description	<i>seconds</i>	Interval in seconds. The range is from 1 to 65535.
Defaults	10 seconds	
Command Modes	Interface configuration	
SupportedUserRoles	network-admin vdc-admin	
Command History	Release	Modification
	5.0(3)	This command was introduced.
Usage Guidelines	<p>Use the otv isis hello-interval command to configure the interval between the hello protocol data units (PDUs) sent on the interface.</p> <p>This command requires a Transport Services license.</p>	
Examples	<p>This example shows how to configure hello interval in seconds:</p> <pre>switch# config t Enter configuration commands, one per line. End with CNTL/Z. switch(config)# interface overlay 1 switch(config-if-overlay)# otv isis hello-interval 30</pre>	
Related Commands	Command	Description
	show otv isis	Displays the IS-IS status and configuration.

[Send document comments to nexus7k-docfeedback@cisco.com](mailto:nexus7k-docfeedback@cisco.com)

otv isis hello-multiplier

To configure a multiplier that you can use to calculate the interval in which protocol data units (PDUs) must be received to keep the adjacency, use the **otv isis hello-multiplier** command. To return to the default setting, use the **no** form of this command.

otv isis hello-multiplier *multiplier*

no otv isis hello-multiplier *multiplier*

Syntax Description	<i>multiplier</i>	Hello multiplier value. The range is from 3 to 1000.
--------------------	-------------------	--

Defaults	3 seconds
----------	-----------

Command Modes	Interface configuration
---------------	-------------------------

SupportedUserRoles	network-admin vdc-admin
--------------------	----------------------------

Command History	Release	Modification
	5.0(3)	This command was introduced.

Usage Guidelines	Use the isis hello-multiplier command to specify the multiplier that you can use to calculate the interval in which a hello PDU must be received to keep up the adjacency. Use the isis hello-multiplier command when hello packets are lost frequently and IS-IS adjacencies are failing unnecessarily. You can raise the hello multiplier and lower the hello interval (isis hello-interval command) to make the hello protocol more reliable without increasing the time required to detect a link failure.
------------------	--

This command requires a Transport Services license.

Examples	This example shows how to configure a multiplier for a hello holding time:
----------	--

```
switch# config t
Enter configuration commands, one per line. End with CNTL/Z.
switch(config)# interface overlay 1
switch(config-if-overlay)# otv isis hello-multiplier 30
```

Related Commands	Command	Description
	show otv isis	Displays the IS-IS status and configuration.

Send document comments to nexus7k-docfeedback@cisco.com

otv isis hello-padding

To configure Overlay Transport Virtualization (OTV) intermediate-System-to-Intermediate System (IS-IS) hello Protocol data units (PDUs) to the full maximum transmission unit (MTU) length, use the **otv isis hello-padding** command. To return to the default setting, use the **no** form of this command.

otv isis hello-padding

no otv isis hello-padding

Syntax Description This command has no arguments or keywords.

Defaults ON

Command Modes Interface configuration

SupportedUserRoles network-admin
vdc-admin

Command History	Release	Modification
	5.0(3)	This command was introduced.

Usage Guidelines Use the **isis hello-padding** command to control IS-IS hello PDU padding. You can disable hello padding to avoid wasting network bandwidth if the MTU of both interfaces is the same or for translational bridging. When you disable hello padding, Cisco routers still send the first five IS-IS hellos padded to the full MTU size, that are still to discover MTU mismatches.

This command requires a Transport Services license.

Examples This example shows how to configure Overlay Transport Virtualization IS-IS hello PDUs to the full maximum transmission unit length:

```
switch# config t
Enter configuration commands, one per line. End with CNTL/Z.
switch(config)# interface overlay 1
switch(config-if-overlay)# otv isis hello-padding
```

Related Commands	Command	Description
	show otv isis	Displays the IS-IS status and configuration.

[Send document comments to nexus7k-docfeedback@cisco.com](mailto:nexus7k-docfeedback@cisco.com)

otv isis lsp-interval

To configure an Overlay Transport Virtualization (OTV) Intermediate System-to-Intermediate System (IS-IS) link-state packet (LSP) transmission interval, use the **otv isis lsp-interval** command. To return to the default setting, use the **no** form of this command.

otv isis lsp-interval *msec*

no otv isis lsp-interval *msec*

Syntax Description	<i>msec</i>	LSP transmission interval. The range is from 10 to 65535.
Defaults	33 milliseconds	
Command Modes	Interface configuration	
Supported User Roles	network-admin vdc-admin	
Command History	Release	Modification
	5.0(3)	This command was introduced.
Usage Guidelines	Use the isis lsp-interval command to specify the interval between LSP Protocol data unit (PDUs) sent on the interface during flooding. This command requires an Transport Services license.	
Examples	This example shows how to configure an LSP transmission interval: switch# config t Enter configuration commands, one per line. End with CNTL/Z. switch(config)# interface overlay 1 switch(config-if-overlay)# otv isis lsp-interval 30	
Related Commands	Command	Description
	show otv isis	Displays the IS-IS status and configuration.

[Send document comments to nexus7k-docfeedback@cisco.com](mailto:nexus7k-docfeedback@cisco.com)

otv isis metric

To configure the Overlay Transport Virtualization (OTV) metric on an interface, use the **otv isis metric** command. To return to the default setting, use the **no** form of this command.

otv isis metric *metric*

no otv isis metric *metric*

Syntax Description	<i>metric</i>	The range is from 1 to 16777215.
Defaults	None	
Command Modes	Interface configuration	
SupportedUserRoles	network-admin vdc-admin	
Command History	Release	Modification
	5.0(3)	This command was introduced.
Usage Guidelines	This command requires a Transport Services license.	
Examples	This example shows how to configure the metric for an interface: <pre>switch# config t Enter configuration commands, one per line. End with CNTL/Z. switch(config)# interface overlay 1 switch(config-if-overlay)# otv isis metric 30 switch(config-if-overlay)#</pre>	
Related Commands	Command	Description
	show otv isis	Displays the IS-IS status and configuration.

[Send document comments to nexus7k-docfeedback@cisco.com](mailto:nexus7k-docfeedback@cisco.com)

otv isis priority

To configure the Overlay Transport Virtualization (OTV) priority for a Designated Intermediate System (DIS) election on the interface, use the **otv isis priority** command. To return to the default setting, use the **no** form of this command.

otv isis priority *priority*

no otv isis priority *priority*

Syntax Description	<i>priority</i>	Priority value. The range is from 0 to 127.
Defaults	64	
Command Modes	Interface configuration	
Supported User Roles	network-admin vdc-admin	
Command History	Release	Modification
	5.0(3)	This command was introduced.
Usage Guidelines	Use the otv isis priority command to specify the priority on an Intermediate System-to-Intermediate System interface. This command requires a Transport Services license.	
Examples	This example shows how to configure the OTV priority for a DIS election on the interface: <pre>switch# config t Enter configuration commands, one per line. End with CNTL/Z. switch(config)# interface overlay 1 switch(config-if-overlay)# otv isis priority 1 switch(config-if-overlay)#</pre>	
Related Commands	Command	Description
	show otv isis	Displays IS-IS status and configuration.

Send document comments to nexus7k-docfeedback@cisco.com

otv join-interface

To associate an Overlay Transport Virtualization (OTV) overlay interface to an external interface, use the **otv join-interface** command. To remove that interface from the overlay interface, use the **no** form of this command.

```
otv join-interface { ethernet slot/port | port-channel channel-number }
```

```
no otv join-interface { ethernet slot/port | port-channel channel-number }
```

Syntax Description	Parameter	Description
	ethernet <i>slot/port</i>	Specifies the slot and port number of the Ethernet interface.
	port-channel <i>channel-number</i>	Specifies the identifying channel number. The range is from 1 to 4096.

Defaults None

Command Modes Overlay interface configuration

Supported User Roles network-admin
vdc-admin

Command History	Release	Modification
	5.0(3)	This command was introduced.

Usage Guidelines Use the **otv join-interface** command to specify the core uplink used for OTV control and multicast/broadcast data traffic. You can also enter this command on a Layer 3 Ethernet subinterface or a port-channel subinterface.

Note

The OTV overlay interface cannot come up if you do not configure **otv join-interface** command.

This command requires a Transport Services license.

Examples This example shows how to associate an external interface on the OTV edge device to the specified overlay interface:

```
switch# config t
Enter configuration commands, one per line. End with CNTL/Z.
switch(config)# interface overlay 1
switch(config-if-overlay)# otv join-interface ethernet 1/2
switch(config-if-overlay)#
```

Send document comments to nexus7k-docfeedback@cisco.com

Related Commands

Command	Description
show feature	Displays information about the features enabled on the device.
show otv	Displays information about OTV.
interface overlay	Configures an OTV overlay interface.

otv site-vlan

To configure a VLAN on all local Overlay Transport Virtualization (OTV) edge devices that belong to the same local site, use the **otv site-vlan** command. To return to the default setting, use the **no** form of this command.

```
otv site-vlan vlan-id
```

```
no otv site-vlan vlan-id
```

Syntax Description	<i>vlan-id</i>	VLAN ID. The range is from 1 to 3967 and from 4048 to 4093.
---------------------------	----------------	---

Defaults	To send IS-IS hellos on a native VLAN (VLAN 1).
-----------------	---

Command Modes	Global configuration
----------------------	----------------------

SupportedUserRoles	network-admin vdc-admin
---------------------------	----------------------------

Command History	Release	Modification
	5.0(3)	This command was introduced.

Usage Guidelines	Use the otv site-vlan global configuration command to configure the site VLAN used to exchange intra-site IS-IS hello messages that are use for Authentication Edge Device (AED) election. This command requires a Transport Services license.
-------------------------	--

Examples	This example shows how to configure a VLAN to discover local OTV devices:
-----------------	---

```
switch(config)# otv site-vlan 4085  
switch(config)#
```

Related Commands	Command	Description
	show otv site	Displays information about the local OTV site.

Send document comments to nexus7k-docfeedback@cisco.com

otv suppress-arp-nd

To suppress sending the Address Resolution Protocol (ARP) and Neighbor Discovery (ND) packets on an overlay network, use the **otv suppress-arp-nd** command. To return to the default setting, use the **no** form of the command.

otv suppress-arp-nd

no otv suppress-arp-nd

Syntax Description

This command has no arguments or keywords.

Defaults

ON. (to suppress Address Resolution Protocol and Neighbor discovery messages).

Command Modes

Overlay interface configuration

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
5.0(3)	This command was introduced.

Usage Guidelines

Use the **suppress-arp-nd** OTV overlay interface command to suppress sending ARP and ND packets on overlay network. The ARP Requests and ND Neighbor Solicitations should be forwarded on the overlay network when the OTV edge device has state for the IPv4 or IPv6 target address. When you use this command, the number of broadcasts/multicast packets sent on the overlay is drastically reduced.

This command requires a Transport Services license.

Note

IPv6 is not supported in this release.

Examples

This example shows how to suppress sending ARP and neighbor discovery ND packets on overlay network:

```
switch# config t
Enter configuration commands, one per line. End with CNTL/Z.
switch(config)# interface overlay 1
switch(config-if-overlay)# otv suppress-arp-nd
switch(config)#
```

Send document comments to nexus7k-docfeedback@cisco.com

Related Commands	Command	Description
	show otv arp-nd-cache	Displays the Layer 2 and Layer 3 address mapping for remote MAC addresses.

[Send document comments to nexus7k-docfeedback@cisco.com](mailto:nexus7k-docfeedback@cisco.com)

otv vpn-name

To configure the name of the specified Overlay Transport Virtualization (OTV) network, use the **otv vpn-name** command. To return to the default setting, use the **no** form of the command.

otv vpn-name *name*

no otv vpn-name *name*

Syntax Description	<i>name</i>	OTV name. The name can be any case-sensitive, alphanumeric string up to 20 characters.
--------------------	-------------	--

Defaults	None
----------	------

Command Modes	Overlay interface configuration
---------------	---------------------------------

SupportedUserRoles	network-admin vdc-admin
--------------------	----------------------------

Command History	Release	Modification
	5.0(3)	This command was introduced.

Usage Guidelines	The OTV name for the specified overlay must be unique to each device. You must have different names for different overlay interfaces on the same device.
------------------	--

Note

The OTV overlay interface cannot come up if you do not configure this command.

This command requires a Transport Services license.

Examples	This example shows how to configure a name for an OTV interface 5:
----------	--

```
switch(config) interface overlay 5
switch(config-if-overlay) # otv vpn-name accounting
switch(config-if-overlay) #
```

Related Commands	Command	Description
	show feature	Displays information about the features enabled on the device.

Send document comments to nexus7k-docfeedback@cisco.com

Command	Description
show otv vpn	Displays information about OTV VPNs.
interface overlay	Configures an OTV overlay interface.

[Send document comments to nexus7k-docfeedback@cisco.com](mailto:nexus7k-docfeedback@cisco.com)

redistribute filter route-map

To redistribute filter route map information from another routing protocol, use the **redistribute filter route-map** command. To return to the default setting, use the **no** form of the command.

redistribute filter route-map *route-map-name*

no redistribute filter route-map *route-map-name*

Syntax Description

route-map-name (Optional) Specifies route map name. The name can be any case-sensitive, alphanumeric string up to 63 characters.

Defaults

None

Command Modes

OTV IS-IS VPN

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
5.0(3)	This command was introduced.

Usage Guidelines

The match mac-list and match vlan functionalities are used in OTV.
This command requires a Transport Services license.

Examples

This example shows how to redistribute filter route map information from another routing protocol:

```
switch# config t
Enter configuration commands, one per line. End with CNTL/Z.
switch(config)# otv-isis default
switch(config-router)# vpn name
switch(config-router-vrf)# redistribute filter route-map active
switch(config-router-vrf)#
```

Related Commands

Command	Description
show feature	Displays information about the features enabled on the device.

Send document comments to nexus7k-docfeedback@cisco.com

restart otv-isis

To restart the OTV ISIS protocol, use the **restart otv-isis** command.

```
restart otv-isis [default]
```

Syntax Description	<i>default</i>	Specifies the name of the IS-IS process. OTV spawns a single IS-IS process and so this tag by default is “default”.
Defaults	None	
Command Modes	Global configuration	
SupportedUserRoles	network-admin vdc-admin	
Command History	Release	Modification
	5.0(3)	This command was introduced.
Usage Guidelines	This command requires a Transport Services license.	
Examples	This example shows how to restart the OTV ISIS process: <pre>switch# config t switch(config)# restart otv-isis default switch(config)#</pre>	
Related Commands	Command	Description
	show feature	Displays information about the features enabled on the device.

show forwarding distribution otv multicast route

To display Focused ion beam Overlay Transport Virtualization (OTV) multicast route information, use the **show forwarding distribution otv multicast route** command.

show forwarding distribution otv multicast route {vlan *vlan-id*}

Syntax Description

vlan	(Optional) specifies VLAN information.
<i>vlan-id</i>	VLAN ID. The range is from 1 to 3967 and from 4048 to 4093.

Defaults

None

Command Modes

Global

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
5.0(3)	This command was introduced.

Usage Guidelines

This command requires a Transport Services license.

Examples

This example shows how to display FIB OTV multicast route information:

```
switch# show forwarding distribution otv multicast route
Vlan: 311, Group: 224.0.0.0/4, Source: 0.0.0.0
  OTV Outgoing Interface List Index: 65535
  Reference Count: 1
  Number of Outgoing Interfaces: 0
Vlan: 311, Group: 224.0.0.0/24, Source: 0.0.0.0
  OTV Outgoing Interface List Index: 1
  Reference Count: 1
  Number of Outgoing Interfaces: 1
    External interface: Ethernet1/6
    Delivery group IP: 239.1.1.1
    Delivery source IP: 102.1.1.1
Vlan: 311, Group: 238.1.1.1, Source: 6.2.2.2
  OTV Outgoing Interface List Index: 2
  Reference Count: 1
  Number of Outgoing Interfaces: 1
    External interface: Ethernet1/6
    Delivery group IP: 232.1.1.0
    Delivery source IP: 102.1.1.1
```

show forwarding otv

To display Overlay Transport Virtualization (OTV) forwarding information on the interface, use the **show forwarding otv** command.

```
show forwarding otv [ethernet port/slot | loopback number | port-channel channel-number | vlan
                    [vlan-id | vlan-interface-number]
```

Syntax Description	Parameter	Description
	ethernet	Specifies the Ethernet interface.
	<i>slot/port</i>	The module and port number.
	loopback	Specifies the loopback interface.
	<i>number</i>	Loopback number. The range is from 0 to 1023.
	port-channel	Specifies the port-channel interface.
	<i>channel-number</i>	Port-channel number. The range is from 1 to 4096.
	vlan	Specifies VLAN information.
	<i>vlan-id</i>	VLAN ID. The range is from 1 to 3967 and from 4048 to 4093.
	<i>vlan--interface-number</i>	VLAN interface number. The range is from 1 to 3967 and from 4048 to 4093.

Defaults None

show otv data-group

To display Overlay Transport Virtualization (OTV) data group information, use the **show otv data-group** command.

```
show otv data-group { delivery-group number | delivery-source number | group number |
                    join-interface number | local overlay number | remote | source number |vlan vlan-id }
```

Syntax Description	
delivery-group	(Optional) Specifies delivery group data group.
delivery-source	(Optional) Specifies delivery source data group.
group	(Optional) Specifies active source group data group.
join-interface	(Optional) Specifies join interface data group.
local	(Optional) Specifies a locally announced data group.
overlay	(Optional) Specifies a overlay interface data group.
remote	(Optional) Specifies a remotely announced data group.
source	(Optional) Specifies active source source data group.
vlan	(Optional) Specifies VLAN data group.
<i>vlan-id</i>	VLAN ID. The range is from 1 to 3967 and from 4048 to 4093.

Defaults None

Command Modes Global

Supported User Roles network-admin
vdc-admin

Command History	Release	Modification
	5.0(3)	This command was introduced.

Usage Guidelines This command requires a Transport Services license.

Examples This example shows how to display OTV data group information:

```
switch(config)# show otv data-group
Local Active Sources for Overlay0
VLAN Active-Source   Active-Group   Delivery-Source Delivery-Group  Ext-I/F
-----
2      1.1.1.1       225.1.1.1     2.3.0.1        239.1.1.0      Eth2/3
switch(config)#
```

Send document comments to nexus7k-docfeedback@cisco.com

This example shows how to display delivery group data group:

```
switch(config)# show otv data-group delivery-group 239.1.1.0

show otv isis active-source

To display Overlay Transport Virtualization (OTV) Intermediate System-to-Intermediate System (IS-IS) data group information, use the **show otv isis active-source** command.

```
show otv isis [otv-isis-tag] active-source [vlan vlan-id [group gip-addr [source sip-addr]]]
[summary] vpn {vpn-name all}
```

Syntax Description		
<i>otv-isis-tag</i>		Specifies the name of the IS-IS process. OTV spawns a single IS-IS process and so this tag by default would be “default”.
vlan <i>vlan-id</i>		(Optional) Specifies IS-IS VLAN information. IS-IS VLAN information. The range is from 0 to 4294967295.
group <i>gip-addr</i>		(Optional) Specifies group information. Displays single IP redistribute route.
source <i>sip-addr</i>		(Optional) Specifies source information. Displays single IP redistribute route.
summary		Displays count of the number of multicast entries
vpn		(Optional) Specifies VPN information.
<i>vpn-name</i>		Specifies VPN name. The maximum length is 32 alphanumeric characters.
all		(Optional) Specifies all configured VPNs.

Defaults None

Command Modes Global

Supported User Roles network-admin
vdc-admin

Command History	Release	Modification
	5.0(3)	This command was introduced.

Usage Guidelines This command requires a Transport Services license.

Examples This example shows how to display IS-IS data group information:

```

show otv isis database

To display the contents of the Overlay Transport Virtualization (OTV) System-to-Intermediate System (IS-IS), link-state packet (LSP) database for each overlay, which can be used to determine the unicast MACs and multicast groups received from each neighbor, use the **show otv isis database** command.

```
show otv isis [otv-isis-tag] database [mgroup] [detail | advertise | summary] [lsp-id]
           {zero-sequence | adjacency adj-id | vpn vpn-name | all}
```

Syntax Description		
	<i>otv-isis-tag</i>	Specifies the name of the IS-IS process. OTV spawns a single IS-IS process and so this tag by default would be “default”.
	mgroup	(Optional) Specifies IS-IS multicast database for each overlay.
	detail	(Optional) Specifies detailed IS-IS information.
	advertise	(Optional) Specifies the capability of the device to be multicast capable unless unicast only is specified.
	summary	(Optional) Specifies summary IS-IS information.
	<i>lsp-id</i>	(Optional) LSP ID in the form of xxxx.xxxx.xxxx.xx-xx.
	zero-sequence	(Optional) Specifies an LSP with a zero sequence number.
	adjacency	(Optional) Specifies the adjacency filter.
	vpn	(Optional) Specifies VPN information.
	<i>vpn-name</i>	VPN name. The maximum length is 32 characters.
	all	Specifies all configured VPNs.

show otv isis hostname

To display Intermediate System-to-Intermediate System (IS-IS) hostname table information, use the **show otv isis hostname** command.

```
show otv isis hostname [detail | vpn {vpn-name | all}]
```

Syntax Description	Parameter	Description
	detail	(Optional) Specifies detailed IS-IS information.
	vpn	(Optional) Specifies VPN information.
	<i>vpn-name</i>	VPN name. The maximum length is 32 alphanumeric characters.
	all	(Optional) Specifies all configured VPNs.

Defaults None

Command Modes Global

Supported User Roles network-admin
vdc-admin

Command History	Release	Modification
	5.0(3)	This command was introduced.

Usage Guidelines This command requires a Transport Services license.

Examples This example shows how to displays the Overlay Transport Virtualization (OTV) Intermediate IS-IS dynamic hostname exchange information:

```
switch# show otv isis hostname
OTV-IS-IS Process: default dynamic hostname table VPN: Overlay1
  Level  System ID      Dynamic hostname
  1       0022.5579.a4c1*    switch
switch#
```

show otv isis interface

To display Intermediate-System-to-Intermediate System (IS-IS) interface information, use the **show otv isis interface** command.

```
show otv isis interface [brief | overlay interface | vpn {vpn-name | all}]
```

Syntax Description

brief	(Optional) Specifies a brief display of IS-IS interfaces.
overlay interface	(Optional) Specifies an overlay interface number. The range is from 1 to 65535.
vpn	(Optional) Specifies VPN information.
<i>vpn-name</i>	VPN name. The maximum length is 32 alphanumeric characters.
all	Specifies all configured VPNs.

Defaults

None.

Command Modes

Command History

Release	Modification
5.0(3)	This command was introduced.

Usage Guidelines

This command lists the various interfaces that Overlay Transport Virtualization ISIS runs on. There is one overlay interface per overlay. By default, this command displays the interfaces for all overlays.

This command requires a Transport Services license.

Examples

This example shows how to displays the IS-IS interface information:

```
switch# show otv isis interface
OTV-IS-IS process: default VPN: Overlay1
Overlay1, Interface status: protocol-down/link-down/admin-down
  IP address: none
  IPv6 address: none
  IPv6 link-local address: none
  ISIS interface operation state : Down/Ready
  Index: 0x0001, Local Circuit ID: 0x01, Circuit Type: L1
Level1
  Adjacency server (local/remote) : enabled / none
  Adjacency server capability : multicast
Authentication type is cleartext
```

■ **show otv isis interface**

Send document comments to nexus7k-docfeedback@cisco.com

```

Authentication keychain is 1
Authentication check specified
  LSP interval: 33 ms, MTU: 1400
Level      Metric   CSNP  Next CSNP  Hello  Multi  Next IIH
1          1       1     Inactive   10     3     Inactive
Level  Adjs  AdjsUp  Pri  Circuit ID      Since
1      0      0     1    switch.01      never
switch#

```

show otv isis ip mroute

To display Overlay Transport Virtualization (OTV) Intermediate-System-to-Intermediate System (IS-IS) IPv4 multicast route information, use the **show otv isis ip mroute** command.

```
show otv isis [otv-isis-tag] ip mroute [vlan vlan-id] [group gip-addr [source sip-addr]]
[summary] vpn {vpn-name all}
```

Syntax Description		
vlan <i>vlan-id</i>	(Optional) Specifies IS-IS VLAN information. IS-IS VLAN information. The range is from 0 to 4294967295.	
group <i>gip-addr</i>	(Optional) Specifies group information. Displays single IP redistribute route.	
source <i>sip-addr</i>	(Optional) Specifies source information. Displays single IP redistribute route.	
summary	Displays count of the number of multicast entries	
vpn	(Optional) Specifies VPN information.	
<i>vpn-name</i>	VPN name. The maximum size is 32 alphanumeric characters.	
all	Specifies all configured VPNs.	

Defaults None

Command Modes Global

Supported User Roles network-admin
vdc-admin

Command History	Release	Modification
	5.0(3)	This command was introduced.

Usage Guidelines This command requires a Transport Services license.

Examples This example shows how to display OTV IS-IS IPv4 multicast route information:

```
switch(config-vlan)# show otv isis ip mroute
switch(config-vlan)# show otv isis ip mroute

show otv mroute

To display the Overlay Transport Virtualization (OTV) multicast route information from the ORIB, use the **show otv mroute** command.

```
show otv mroute [overlay overlay-interface-number | vlan vlan-id [group group ipv4 address | source source ipv4 address [group group ipv4 address]]]
```

Syntax Description

overlay	(Optional) Specifies the overlay interface.
<i>overlay-interface-number</i>	Specifies Interface number. The range is from 0 to 65535.
vlan	(Optional) Specifies routes for a specific VLAN.
<i>vlan-id</i>	VLAN ID. The range is from 1 to 3967 and from 4048 to 4093.
group	(Optional) Specifies multicast group.
<i>group ipv4 address</i>	Specifies group ipv4 address.
source	(Optional) Specifies multicast source.
<i>source ipv4 address</i>	Specifies source ipv4 address.

Defaults

None

Command Modes

Global

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
5.0(3)	This command was introduced.

Usage Guidelines

This command requires a Transport Services license.

Note

IPv6 is not supported in this release.

Examples

This example shows how to display the multicast route information from the ORIB:

```
switch# show otv mroute
OTV Multicast Routing Table For Overlay0
(2, 1.1.1.1, 225.1.1.1), metric: 0, uptime: 00:01:37, igmp
Outgoing interface list: (count: 1)
Eth2/1
(2, 2.2.2.2, 225.2.2.2), metric: 0, uptime: 00:00:04, isis-default
```

■ show otv mroute

show otv route

To display Overlay Transport Virtualization (OTV) Intermediate-System-to-Intermediate System (IS-IS) route information from the ORBI, use the **show otv route** command.

show otv route [**overlay** *overlay-interface-number* | **vlan** *vlan-id*]

Syntax Description

overlay	(Optional) Specifies the overlay interface.
<i>overlay-interface-number</i>	Specifies Interface number. The range is from 0 to 65535.
vlan	(Optional) Specifies routes for a specific VLAN.
<i>vlan-id</i>	VLAN ID. The range is from 1 to 3967 and from 4048 to 4093.

Defaults

None

Command Modes

Global

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
5.0(3)	This command was introduced.

Usage Guidelines

This command requires a Transport Services license.

Note

IPv6 is not supported in this release.

Examples

This example shows how to display OTV IS-IS route information:

```
switch(config)# show otv route
OTV Unicast MAC Routing Table For Overlay0

VLAN  MAC-Address      Metric  Uptime    Owner      Next-hop(s)
----  -
2  0004.23e1.bc8d    42      00:06:39  overlay    zg2
2  001b.2103.b1df    42      00:06:39  overlay    zg2
2  001b.2103.be17    11      00:00:07  site       Ethernet2/1
switch(config)#
```

show otv statistics multicast

To display multicast statistics information, use the **show otv statistics multicast** command.

show otv statistics multicast *vlan-id*

Syntax Description	<i>vlan-id</i> (Optional) VLAN ID. The range is from 1 to 4095.
---------------------------	---

Defaults	None
-----------------	------

Command Modes	Configuration mode
----------------------	--------------------

SupportedUserRoles	network-admin vdc-admin
---------------------------	----------------------------

Command History	Release	Modification
	5.0(3)	This command was introduced.

Usage Guidelines	This command requires a Transport Services license.
-------------------------	---

Examples	This example shows how to displays multicast statistics information:
-----------------	--

```
switch(config)# show otv statistics multicast 1
Multicast Statistics for vlan 1
switch(config)#
```

Related Commands	Command	Description
	show otv isis	Displays the IS-IS status and configuration.

show otv vlan

To display the VLAN information for the Overlay Transport Virtualization overlay interface, use the **show otv vlan** command.

```
show otv vlan {vlan-range | authoritative {detail} | detail}
```

Syntax Description		
vlan-range	VLAN range.	The range is from 1 to 3967 and from 4048 to 4094.
authoritative	Specifies each interface in the VLAN.	
detail	Specifies each interface in the VLAN.	

Defaults None

Command Modes Global

SupportedUserRoles network-admin
vdc-admin

Command History	Release	Modification
	5.0(3)	This command was introduced.

Usage Guidelines This command requires a Transport Services license.

Examples This example shows how to display VLAN information for the OTV overlay interface:

```
switch# config t
Enter configuration commands, one per line. End with CNTL/Z.
switch(config)# interface overlay 1
switch(config-if-overlay)# show otv vlan 1 detail
OTV VLAN Configuration Information
Legend: F - Forwarding B - Blocked
VLAN-ID  VlanState          Switchport/  External  Overlay
          VlanState          Forward Count Interface  Group
switch#
```

show otv vpn

To display the information about an overlay network, use the **show otv vpn** command.

show otv vpn *vpn-name*

Syntax Description	<i>vpn-name</i>	Overlay Transport Virtualization VPN name.
Defaults	None	
Command Modes	Global	
SupportedUserRoles	network-admin vdc-admin	
Command History	Release	Modification
	5.0(3)	This command was introduced.

Usage Guidelines This command requires a Transport Services license.

Examples This example shows how to display the information about an overlay network:

```
switch# show otv vpn overlay1
OTV Overlay Information
Overlay Interface Overlay1
  VPN Name           : Overlay1
  VPN ID             : 2
  State              : DOWN
                    : Missing Parameter: Control Group Address
  IPv4 multicast group : [None]
  IPv6 multicast group : [None]
  Mcast data group range(s):
  External interface(s) :
  External IPv4 address : 0.0.0.0
  External IPv6 address : 0::
  Encapsulation format : GRE/IPv4
  Site-vlan           : 4085
  Capability           : Multicast-Reachable
  Is Adjacency Server : YES
  Adj Server Configured : YES
  Prim/Sec Adj Svr(s) : 192.0.2.1 / [None]
switch#
```

show run otv-isis

To display the current running configuration of the Overlay Transport Virtualization (OTV) Intermediate-System-to-Intermediate System (IS-IS) process, use the **show run otv-isis** command.

```
show otv run otv-isis [all]
```

Syntax Description	all (Optional) Specifies the running configuration.
---------------------------	--

Defaults	None
-----------------	------

Command Modes	Global
----------------------	--------

SupportedUserRoles	network-admin vdc-admin
---------------------------	----------------------------

Command History	Release	Modification
	5.0(3)	This command was introduced.

Usage Guidelines	This command requires a Transport Services license.
-------------------------	---

Examples This example shows how to display the current running configuration of the OTV IS-IS process:

```
switch# show run otv-isis
!Command: show running-config otv-isis
!Time: Mon Feb  1 03:05:57 2010
version 5.0(1)
interface Overlay1
  otv isis priority 1
  otv isis csnp-interval 1
  otv isis authentication-type cleartext
  otv isis authentication key-chain 1
switch#
```

Related Commands	Command	Description
	show otv isis	Displays the IS-IS status and configuration.

spf-interval

To configure an SPF generation interval, use the **spf-interval** command. To return to the default setting, use the **no** form of this command.

```
spf-interval {spf-max-wait | spf-initial-wait | spf-second-wait}
```

```
no spf-interval {spf-max-wait | spf-initial-wait | spf-second-wait}
```

Syntax Description	spf-max-wait	spf-initial-wait	spf-second-wait
	Specifies the maximum interval (in seconds) between two consecutive occurrences of an LSP being generated. The range is from 50 to 120000. Default value is 8000.	Specifies the initial LSP generation delay (in milliseconds). The range is from 50 to 120000. The default is 50.	Specifies the hold time between the first and second LSP generation (in milliseconds). The range is from 50 to 120000. The default is 50.

Defaults

The defaults are as follows:

- spf-max-wait: 8000
- spf-initial-wait: 50
- spf-second-wait: 50

Command Modes

OTV IS-IS VPN

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
5.0(3)	This command was introduced.

Usage Guidelines

This command requires a Transport Services license.

Examples

This example shows how to configure an interval for SPF generation:

```
switch(config-router-vrf)# spf-gen-interval 9000 60 70  
switch(config-router-vrf)#
```

■ spf-interval
